Gyrocopter v0.3.0

Gyroscope Simulator - Extension for Chrome Developer Tools

[Download from Chrome Web Store](#)

Do you develop for mobile? Then you need a proper gyroscope simulator.

This simulator allows you to dynamically change rotation of a mobile device and also sends deviceorientation events into your web app.

You can also select browser in which you want to perform device rotation. If you want to know how browsers handle device orientation events read [test results](#).

Demo

Check out [Angular Adaptive Scroll project](#)

Why?

Because Chrome developer tools override is not enough.

You want to dynamically change rotation of a mobile device and also see live preview when you develop.
