angular-adaptive-youtube v0.1.0 `build passing`

Save data, conditionally load youtube videos.

Demo

Check out http://angular-adaptive.github.io/adaptive-youtube/demo/

Requirements

- AngularJS v ~1.2.x

Usage

We use bower for dependency management. Add

```
dependencies: {
    "angular-adaptive-youtube": "latest"
}
```

To your `bower.json` file. Then run

```
bower install
```

This will copy the youtube module files into your `bower_components` folder, along with its dependencies. Load the script files in your application:

```
<script type="text/javascript" src="bower_components/angular/angular.js"></script>
<script type="text/javascript"
  src="bower_components/angular-adaptive-youtube/angular-adaptive-youtube.min.js"></scrip
```

Add the adaptive.youtube module as a dependency to your application module:

```
var myAppModule = angular.module('MyApp', ['adaptive.youtube']);
```

Set up styles and a video id

```
.youtube { width: 100%; height: 500px; }
```

```
$scope.youtubeId = 'kxopViU98Xo';
```

And use it

```
<youtube video="youtubeId" class="youtube"></youtube>
```

Contributing

Pull requests are welcome.

Make a PR against canary branch and don't bump any versions.

Please respect the code style in place.
